Patient Volume Information

Medicaid

To qualify for the Medicaid incentive programs, an eligible professional must have a minimum of 30 percent of all patient encounters attributable to Medicaid over any continuous, representative 90-day period within the most recent calendar year prior to reporting. There are two statutory exceptions to the general 30 percent rule. The first exception is that a pediatrician may have at least 20 percent patient volume attributable to Medicaid. The second exception is for those practicing predominantly in an FQHC or RHC who must have a minimum of 30 percent patient volume attributable to “needy individuals.” With these exceptions, as well, the assessment is made over a continuous 90-day period within the most recent calendar year prior to reporting.

The Calculation:

$$\frac{\text{Total Medicaid patient volume in any representative continuous 90-day period in the preceding calendar year}}{\text{Total patient encounters in that same 90-day period}} \times 100$$

You may have to enter the numerator and denominator as part of the Medicaid application process, maintain back-up documentation, and make the back-up documentation available at the Department of Health Care Services’ request for review.

Medicare

For the Medicare incentive program, there is no patient volume requirement. However, your Medicare incentive payment is based on your Medicare charges. To estimate your Medicare incentive payment, you need to estimate your total allowable Medicare charges for the year in which you want to obtain payment.

How to Obtain Your Patient Volume Information

1

These materials were developed by the California Academy of Family Physicians with grant support from The Physicians Foundation, and have been reviewed by the FAFP to ensure they apply to Florida licensed physicians. Permission for adapting the information for respective state needs is given on the condition that this statement appears on each page of such documents. Copyright 2011.

Reports on patient volume information are available within most practice management software systems. You can search visit count, type of visit relative value units (RVUs), charges/ collections by code, patients by payer, payer amounts versus charges, codes per physician, and more. You would take those reports and export it to a Microsoft Excel program or a Business Summary worksheet ([*Medical Practice Forms: Every Form You Need to Succeed*](#), Third Edition, 2003) for further analysis.
